

ARGON SET

2 FUNCTIONS 2 CONNECTORS

Talking about quickdraws, the actual trend is to create sets fitted with two connectors with the same shape of the body, missing that they have two completely different functions: the first connector, usually with straight gate, must easily enter, exit and rotate in the spit, the second one must have a wide passage in order to easily insert the rope.

Starting from these considerations, KONG has developed specific connectors for the different applications, creating the new ARGON quickdraws family.

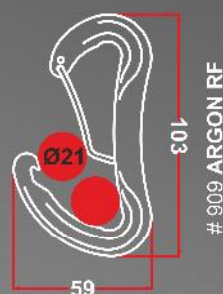

NEW 2016!

New colors and optimized gates, now smoother and safer.

Ultralight express set (only 69g!) fitted with two wire gate connectors. The perfect choice for those looking at max lightness.

Key Lock connector helps the disconnection from the spit while the wire gate connector helps the inserting of the rope. The perfect compromise between lightness and functionality.

Key Lock system on both connectors in order to avoid every possible catch. Perfect for those seeking the practicality of use.
